

## MODEL TEST PAPER 5

### INTERMEDIATE: GROUP – II

#### PAPER – 4: COST AND MANAGEMENT ACCOUNTING

#### Suggested Answers/ Solution

#### PART I – Case Scenario based MCQs

1. (a) Working notes:

|                                   |                                  |
|-----------------------------------|----------------------------------|
| Factory cost (33,00,000 x 0.25)   | INR 8,25,000                     |
| Add: Freight (50,000 x 0.25)      | <u>INR 12,500</u>                |
| F.O.B. (Free On Board)            | <u>INR 8,37,500</u>              |
| Containers (2,00,000 x 0.25)      | INR 50,000                       |
| Insurance (1,500 x 75)            | INR 1,12,500                     |
| Ocean freight (2,000 x 75)        | INR 1,50,000                     |
| CIF (Cost, Insurance and Freight) | = 8,37,500 + 1,12,500 + 1,50,000 |
|                                   | = INR 11,00,000                  |
| Custom duty                       | = 20% x 11,00,000 = INR 2,20,000 |
| IGST                              | = 18% x (11,00,000 + 2,20,000)   |
|                                   | = INR 2,37,600                   |
| Penalty                           | = INR 15,000                     |
| Commission                        |                                  |
| Indian                            | = 6% x 8,25,000 = INR 49,500     |
| Srilankan                         | = 12% x 8,25,000 = INR 99,000    |

| Particulars                              | Amount (INR)     |
|------------------------------------------|------------------|
| Factory cost                             | 8,25,000         |
| Containers (50,000-38,000)               | 12,000           |
| Insurance                                | 1,12,500         |
| Ocean freight                            | 1,50,000         |
| Freight inwards                          | 12,500           |
| Commission (49,500+99,000)               | 1,48,500         |
| Custom duty non-refundable 20%* 2,20,000 | 44,000           |
| TOTAL                                    | <b>13,04,500</b> |

2. (a) Good units =  $8,000 \times (1-5\%) = 7,600$  UNITS

Normal loss to be absorbed in good units. No abnormal loss.

| Particulars                                                                                                                                            | Product Zenga (INR) |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Factory cost                                                                                                                                           | 4,50,000            |
| Other cost except commission, insurance and custom duty to be absorbed on the basis of quantity i.e. 12:8 or 3:2 $(12,000+1,50,000+12,500) \times 2/5$ | 69,800              |
| Commission, insurance and custom duty to be absorbed on value basis 15:18 or 5:6 $(1,48,500+1,12,500+44,000) \times 6/11$                              | 1,66,363.63         |
| Total Cost                                                                                                                                             | 6,86,163.63         |
| Number of good units                                                                                                                                   | 7,600 units         |
| Per unit Cost                                                                                                                                          | <b>90.28</b>        |

3. (b) Good units =  $12000 \times (1-5\%) = 11400$  units

| Particulars                                                                    | Product Xendga (INR) |
|--------------------------------------------------------------------------------|----------------------|
| Factory cost                                                                   | 3,75,000             |
| Other cost $(12,000+1,50,000+12,500) \times 3/5$                               | 1,04,700             |
| Commission, insurance and custom duty $(1,48,500+1,12,500+44,000) \times 5/11$ | 1,38,636.36          |
| Total Cost                                                                     | 618,336.36           |
| Number of good units                                                           | 11,400 units         |
| Per unit Cost                                                                  | <b>54.24</b>         |

- 4 (a) Custom duty  $80\% \times 2,20,000 = 1,76,000$   
 Add: IGST  $= 2,37,600$   
**4,13,600**

5. (c) Normal loss upto 8%

Abnormal loss 1%

Total cost of xendga INR 6,18,336.36

Total cost of zenga INR 6,86,163.63

| Particulars                     | XENGDA (INR)                 | ZENGA (INR)                    | (INR) |
|---------------------------------|------------------------------|--------------------------------|-------|
| Normal loss of 8%               | 960 units                    | 640 units                      |       |
| Good units after normal loss    | 11,040 units                 | 7,360 units                    |       |
| Per unit cost to be absorbed in | 56<br>$(6,18,336.36/11,040)$ | 93.23<br>$(6,86,163.63/7,360)$ |       |

|                                                             |                  |                      |          |
|-------------------------------------------------------------|------------------|----------------------|----------|
| good units (total costs/no of good units after normal loss) |                  |                      |          |
| Abnormal loss in units 1%                                   | 120 units        | 80 units             |          |
| Loss in Profit & Loss                                       | 56 x 120 = 6,720 | 93.23 x 80 = 7,458.4 | 14,178.4 |

6. (a) Material Mix Variance (Cotton + Polyester) =  $\{(RSQ \times SP) - (AQ \times SP)\}$   
 $= \{7,08,570 - 7,10,000\}$   
 $= 1,430 (A)$
- Material Yield Variance (Cotton + Polyester) =  $\{(SQ \times SP) - (RSQ \times SP)\}$   
 $= \{7,51,770 - 7,08,570\}$   
 $= 43,200 (F)$
7. (d) Material Price Variance (Cotton + Polyester) =  $\{(AQ \times SP) - (AQ \times AP)\}$   
 $= \{7,10,000 - 6,72,500\}$   
 $= 37,500 (F)$
8. (c) Material Cost Variance (Cotton + Polyester) =  $\{(SQ \times SP) - (AQ \times AP)\}$   
 $= \{7,51,770 - 6,72,500\}$   
 $= 79,270 (F)$

### Working Note

#### Material Variances:

| Material  | SQ<br>(WN-1)    | SP<br>(₹) | SQ × SP<br>(₹)  | RSQ<br>(WN-2)   | RSQ × SP<br>(₹) | AQ              | AQ × SP<br>(₹)  | AP<br>(₹) | AQ × AP<br>(₹)  |
|-----------|-----------------|-----------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------|-----------------|
| Cotton    | 9,397 m         | 50        | 4,69,850        | 8,857 m         | 4,42,850        | 9,000 m         | 4,50,000        | 48        | 4,32,000        |
| Polyester | 7,048 m         | 40        | 2,81,920        | 6,643 m         | 2,65,720        | 6,500 m         | 2,60,000        | 37        | 2,40,500        |
|           | <b>16,445 m</b> |           | <b>7,51,770</b> | <b>15,500 m</b> | <b>7,08,570</b> | <b>15,500 m</b> | <b>7,10,000</b> |           | <b>6,72,500</b> |

#### WN-1: Standard Quantity (SQ):

$$\text{Cotton} - \left( \frac{8,000\text{m}}{0.9 \times 14,000\text{m}} \times 14,800\text{m} \right) = 9,396.8 \text{ or } 9,397 \text{ m}$$

$$\text{Polyester} - \left( \frac{6,000\text{m}}{0.9 \times 14,000\text{m}} \times 14,800\text{m} \right) = 7,047.6 \text{ or } 7048 \text{ m}$$

#### WN- 2: Revised Standard Quantity (RSQ):

$$\text{Cotton} - \left( \frac{8,000\text{m}}{14,000\text{m}} \times 15,500\text{m} \right) = 8,857.1 \text{ or } 8857 \text{ m}$$

$$\text{Polyester} - \left( \frac{6,000\text{m}}{14,000\text{m}} \times 15,500\text{m} \right) = 6,642.8 \text{ or } 6643 \text{ m}$$

9. (b) Labour Efficiency Variance (Skilled + Unskilled) =  $\{(SH \times SR) - (AH \times SR)\}$   
 $= \{61,496 - 63,920\}$   
 $= 2,424 \text{ (A)}$
- Labour Yield Variance (Skilled + Unskilled) =  $\{(SH \times SR) - (RSH \times SR)\}$   
 $= \{61,496 - 63,052\}$   
 $= 1,556 \text{ (A)}$
10. (a) Labour Cost Variance (Skilled + Unskilled) =  $\{(SH \times SR) - (AH \times AR)\}$   
 $= \{61,496 - 62,380\}$   
 $= 884 \text{ (A)}$

### Working Note

#### Labour Variances:

| Labour    | SH<br>(WN-3) | SR<br>(₹) | SH × SR<br>(₹) | RSH<br>(WN-4) | RSH × SR<br>(₹) | AH    | AH × SR<br>(₹) | AR<br>(₹) | AH × AR<br>(₹) |
|-----------|--------------|-----------|----------------|---------------|-----------------|-------|----------------|-----------|----------------|
| Skilled   | 1,116 hrs    | 37.50     | 41,850         | 1144          | 42,900          | 1,200 | 45,000         | 35.50     | 42,600         |
| Unskilled | 893 hrs      | 22.00     | 19,646         | 916           | 20,152          | 860   | 18,920         | 23.00     | 19,780         |
|           | 2,009 hrs    |           | 61,496         | 2,060         | 63,052          | 2,060 | 63,920         |           | 62,380         |

#### WN- 3: Standard Hours (SH):

$$\text{Skilled labour-} \left( \frac{0.95 \times 1,000\text{hr.}}{0.90 \times 14,000\text{m.}} \times 14,800\text{m.} \right) = 1,115.87 \text{ or } 1,116 \text{ hrs.}$$

$$\text{Unskilled labour-} \left( \frac{0.95 \times 800\text{hr.}}{0.90 \times 14,000\text{m.}} \times 14,800\text{m.} \right) = 892.69 \text{ or } 893 \text{ hrs.}$$

#### WN- 4: Revised Standard Hours (RSH):

$$\text{Skilled labour-} \left( \frac{1,000\text{hr.}}{1,800\text{hr.}} \times 2,060\text{hr.} \right) = 1,144.44 \text{ or } 1,144 \text{ hrs.}$$

$$\text{Unskilled labour-} \left( \frac{800\text{hr.}}{1,800\text{hr.}} \times 2,060\text{hr.} \right) = 915.56 \text{ or } 916 \text{ hrs.}$$

11. (d) Break-even point =  $\frac{\text{Fixed Costs} + \text{Targeted Profit}}{(\text{Selling Price per Unit} - \text{Variable Cost per Unit})}$   
 $= (5,00,000 + 2,00,000)/100 = 7,000 \text{ units}$

12. (d) Expected Output = Input Material – Normal Loss  
 Expected Output = 1,200 Kg – 96 Kg = 1,104 kg  
 Abnormal loss = 1,104 kg – 1,100 kg = 4 kg
13. (b) Overhead Rate = Total Estimated Machine Hours / Total Estimated Overhead Cost  
 = ₹ 6,00,000 / 30,000 = ₹ 20  
 Allocated Overhead = Overhead Rate x Machine Hours Used by the Job  
 = ₹ 20 x 300 hrs = ₹ 6,000
14. (c) Efficiency Ratio = Activity Ratio / Capacity Utilization Ratio  
 = 0.95 / 0.85 = 1.117 or 112%
15. (b) Total cost ₹ 20,000 + (300 units x (₹ 20 + ₹ 10)) = ₹ 29,000

### PART-II– Descriptive Questions

1. (a) Increase in hourly rate of wages under Rowan Plan is ₹ 30 i.e. (₹ 180 – ₹ 150)

$$\frac{\text{Time Saved}}{\text{Time Allowed}} \times ₹ 150 = ₹ 30 \text{ (Please refer Working Note)}$$

$$\text{Or, } \frac{\text{Time Saved}}{50 \text{ hours}} \times ₹ 150 = ₹ 30$$

$$\text{Or, Time saved} = \frac{1,500}{150} = 10 \text{ hours}$$

Therefore, Time Taken is 40 hours i.e. (50 hours – 10 hours)

Effective Hourly Rate under Halsey System:

|                       |                              |            |
|-----------------------|------------------------------|------------|
| Time saved            | = 10 hours                   |            |
| Bonus @ 50%           | = 10 hours x 50% x ₹ 150     | = Rs 750   |
| Total Wages           | = (₹ 150 x 40 hours + ₹ 750) | = Rs 6,750 |
| Effective Hourly Rate | = ₹ 6,750 ÷ 40 hours         | = ₹ 168.75 |

### Working Note:

Effective hourly rate

$$= \frac{(\text{Time Taken} \times \text{Rate per hour}) + \frac{\text{Time Taken}}{\text{Time Allowed}} \times \text{Time Saved} \times \text{Rate per hour}}{\text{Time Taken}}$$

$$\text{Or, } ₹ 180 = \frac{\text{Time Taken} \times \text{Rate per hour}}{\text{Time Taken}} + \frac{\frac{\text{Time Taken}}{\text{Time Allowed}} \times \text{Time Saved} \times \text{Rate per hour}}{\text{Time Taken}}$$

$$\text{Or, } ₹ 180 - \frac{\text{Time Taken} \times \text{Rate per hour}}{\text{Time Taken}} = \frac{\text{Time Taken}}{\text{Time Allowed}} \times \text{Time Saved} \times \text{Rate per hour} \times \frac{1}{\text{Time Taken}}$$

$$\text{Or, } ₹ 180 - ₹ 150 = \frac{\text{Time Saved}}{\text{Time Allowed}} \times ₹ 150$$

(b)

|          | Particulars                                 | Amount in ₹ |
|----------|---------------------------------------------|-------------|
| <b>A</b> | <b>Operating costs:</b>                     |             |
|          | Petrol                                      | 400         |
|          | Oil                                         | 170         |
|          | Grease                                      | 90          |
|          | Wages to Driver                             | 550         |
|          | Wages to Worker                             | 350         |

|          | Repairs                                     | 170         |
|          | Overhead                                    | 60          |
|          | Tyres                                       | 150         |
|          | Garage Charges                              | 100         |
|          | (B)                                         | 480         |
| <b>C</b> | <b>Fixed Cost:</b>                          |             |
|          | Insurance                                   | 50          |
|          | License, Tax etc                            | 80          |
|          | Interest                                    | 40          |
|          | Other Overheads                             | 190         |
|          | Depreciation<br>(54,000 - 36,000)<br>5 x 12 | 300         |
|          | (C)                                         | 660         |
|          | Total Cost (A + B + C)                      | 2,700       |

- (i) Cost per days maintained = ₹ 2700/30 days = ₹ 90
- (ii) Cost per days operated = ₹ 2700/25 days = ₹ 108
- (iii) Cost per hours operated = ₹ 2700/300 hours = ₹ 9
- (iv) Cost per kilometres covered = ₹ 2700/2500 kms = ₹ 1.08
- (v) Cost per commercial tonne kms = ₹ 2700/5000 tonne kms = ₹ 0.54

$$\begin{aligned}
 \text{*Commercial tonne kms} &= \text{Total distance travelled} \times \text{Average load} \\
 &= \frac{(4 \text{ tonnes} + 0 \text{ tonnes})}{2} \times 2500 \text{ kms} \\
 &= 5000 \text{ tonne kms}
 \end{aligned}$$

(c) (i) Calculation of most Economical Production Run

$$= \sqrt{\frac{2 \times 60,000 \times ₹ 4,800}{12 \times 12}} = 2,000 \text{ Vaccine}$$

(ii) Calculation of Extra Cost due to processing of 15,000 vaccines in a batch

|                     | When run size is<br>2,000 vaccines                        | When run size is<br>15,000 vaccines                         |
|---------------------|-----------------------------------------------------------|-------------------------------------------------------------|
| Total set up cost   | $= \frac{60,000}{2,000} \times ₹ 4,800$<br>$= ₹ 1,44,000$ | $= \frac{60,000}{15,000} \times ₹ 4,800$<br>$= ₹ 19,200$    |
| Total Carrying cost | $\frac{1}{2} \times 2,000 \times ₹ 144$<br>$= ₹ 1,44,000$ | $\frac{1}{2} \times 15,000 \times ₹ 144$<br>$= ₹ 10,80,000$ |
| Total Cost          | ₹ 2,88,000                                                | ₹ 10,99,200                                                 |

Thus, extra cost = ₹ 10,99,200 – ₹ 2,88,000 = ₹ 8,11,200

2. (a) (i) Statement of Equivalent Production

| Particulars      | Input Units | Particulars                                      | Output Units | Equivalent Production |          |               |          |
|------------------|-------------|--------------------------------------------------|--------------|-----------------------|----------|---------------|----------|
|                  |             |                                                  |              | Material              |          | Labour & O.H. |          |
|                  |             |                                                  |              | %                     | Units    | %             | Units    |
| Opening WIP      | 31,000      | Completed and transferred to Process (Soldering) | 5,42,500     | 100                   | 5,42,500 | 100           | 5,42,500 |
| Units introduced | 5,89,000    | Normal Loss (5% of 6,20,000)                     | 31,000       | --                    | --       | --            | --       |
|                  |             | Abnormal loss (Balancing figure)                 | 15,500       | 100                   | 15,500   | 80            | 12,400   |
|                  |             | Closing WIP                                      | 31,000       | 100                   | 31,000   | 80            | 24,800   |
|                  | 6,20,000    |                                                  | 6,20,000     |                       | 5,89,000 |               | 5,79,700 |

Statement showing cost for each element

| Particulars                                                  | Materials (₹) | Labour (₹) | Overhead (₹) | Total (₹)   |
|--------------------------------------------------------------|---------------|------------|--------------|-------------|
| Cost of opening work-in-process                              | 12,40,000     | 2,32,500   | 6,97,500     | 21,70,000   |
| Cost incurred during the month                               | 2,29,40,000   | 55,64,500  | 1,66,93,500  | 4,51,98,000 |
| Less: Realisable Value of normal scrap (₹ 20 × 31,000 units) | (6,20,000)    | --         | --           | (6,20,000)  |
| Total cost: (A)                                              | 2,35,60,000   | 57,97,000  | 1,73,91,000  | 4,67,48,000 |

|  |        |           | By Costing Profit & Loss A/c |        | 8,06,000  |
|  | 15,500 | 11,16,000 |                              | 15,500 | 11,16,000 |

(b) ABC is particularly needed by organisations for product costing in the following situations:

1. **High amount of overhead:** When production overheads are high and form significant costs, ABC is more useful than traditional costing system.
2. **Wide range of products:** ABC is most suitable, when, there is diversity in the product range or there are multiple products.
3. **Presence of non-volume related activities:** When non-volume related activities e.g. material handling, inspection set-up, are present significantly and traditional system cannot be applied, ABC is a superior and better option. ABC will identify non-value-adding activities in the production process that might be a suitable focus for attention or elimination.
4. **Stiff competition:** When the organisation is facing stiff competition and there is an urgent requirement to compute cost accurately and to fix the selling price according to the market situation, ABC is very useful. ABC can also facilitate in reducing cost by identifying non-value-adding activities in the production process that might be a suitable focus for attention or elimination.

3. (a)

| <b>Contribution per tonne</b>                                 | <b>(₹)</b>      |
|---------------------------------------------------------------|-----------------|
| Sales Price                                                   | 185.00          |
| Variable Cost:                                                |                 |
| Material (W.N.-1)                                             | 90.00           |
| Labour (W.N.-2)                                               | 13.00           |
| Variable Overhead (W.N.-3)                                    | 40.00           |
| Contribution                                                  | 42.00           |

- (b) As the machinery is used to a varying degree in different departments, the use of **departmental rates** is to be preferred. The overhead recovery rates in different departments would be as follows:

- (i) **Operating Department:** The use of machine hours is the predominant factor of production in Operating Department. Hence, machine hour rate should be used to recover overheads.

The overhead recovery rate based on machine hours would be calculated as follows:

$$\begin{aligned}\text{Machine hour rate} &= \frac{\text{Budgeted factory Overheads}}{\text{Budgeted machine hours}} \\ &= \frac{\text{₹ } 35,64,000}{7,92,000} = \text{₹ } 4.50 \text{ per hour}\end{aligned}$$

- (ii) **Assembly Department:** Direct labour hours is the main factor of production in Assembly Department. Hence, direct labour hour rate should be used to recover overheads.

The overhead recovery rate based on direct labour hours would be calculated as follows:

$$\begin{aligned}\text{Direct labour hour rate} &= \frac{\text{Budgeted factory Overheads}}{\text{Budgeted direct labour hours}} \\ &= \frac{\text{₹ } 9,66,000}{6,90,000} = \text{₹ } 1.40 \text{ per hour}\end{aligned}$$

- (iii) **Quality Control Department:** Direct labour hours is the main factor of production in Quality Control Department. Hence, direct labour hour rate should be used to recover overheads.

The overhead recovery rate based on direct labour hours would be calculated as follows:

$$\begin{aligned}\text{Direct labour hour rate} &= \frac{\text{Budgeted factory Overheads}}{\text{Budgeted direct labour hours}} \\ &= \frac{\text{₹ } 4,20,000}{3,00,000} = \text{₹ } 1.40 \text{ per hour}\end{aligned}$$

- (iv) **Packing Department:** Direct labour hours is the main factor of production in Packing Department. Hence, direct labour hour rate should be used to recover overheads.

The overhead recovery rate based on direct labour hours would be calculated as follows:

$$\begin{aligned}\text{Direct labour hour rate} &= \frac{\text{Budgeted factory Overheads}}{\text{Budgeted direct labour hours}} \\ &= \frac{\text{₹ } 12,37,500}{4,95,000} = \text{₹ } 2.50 \text{ per hour}\end{aligned}$$

| Fixed selling overhead (note 5)             |                 | 1,15,000         |
| Administrative overhead (note 6)            |                 | 1,84,000         |
| <b>Fixed cost</b>                           |                 | <b>5,19,000</b>  |
| <b>Total cost</b>                           |                 | <b>41,64,000</b> |
| Add: Profit 25% on total cost               |                 | 10,41,000        |
| <b>Sales</b>                                |                 | <b>52,05,000</b> |
| <b>Contribution (Sales – Variable cost)</b> |                 | <b>15,60,000</b> |

**Working Notes:**

- At 80% level of capacity (current year), the production is 80,000 units.

Thus, total level of capacity is 1,00,000 units.

Therefore, Year 2 is at 70% capacity and Year 3 is at 60% capacity as the production is increasing by 10% of its capacity consistently.

- Direct Material

|                        | (₹)             |                        | (₹)             |
|------------------------|-----------------|------------------------|-----------------|
| 80% Capacity           | 16,00,000       | 70% Capacity           | 14,00,000       |
| 70% Capacity           | 14,00,000       | 60% Capacity           | 12,00,000       |
| 10% change in capacity | <b>2,00,000</b> | 10% change in capacity | <b>2,00,000</b> |

For 10% increase in capacity, the total direct material cost regularly changes by ₹ 2,00,000

Thus, Direct material cost (variable) = ₹ 2,00,000 ÷ 10,000 = ₹ 20

After 10% increase in price, direct material cost per unit = ₹ 20 × 1.10 = ₹ 22

Direct material cost at 90,000 budgeted units = 90,000 × ₹ 22 = ₹ 19,80,000

- Direct labour:

|                        | (₹)             |                        | (₹)             |
|------------------------|-----------------|------------------------|-----------------|
| 80% Capacity           | 8,00,000        | 70% Capacity           | 7,00,000        |
| 70% Capacity           | 7,00,000        | 60% Capacity           | 6,00,000        |
| 10% change in capacity | <b>1,00,000</b> | 10% change in capacity | <b>1,00,000</b> |

For 10% increase in capacity, direct labour cost regularly changes by ₹ 1,00,000.

Direct labour cost per unit = ₹ 1,00,000 ÷ 10,000 = ₹ 10

After 20% increase in price, direct labour cost per unit = ₹ 10 × 1.20 = ₹ 12

Direct labour for 90,000 units = 90,000 units × ₹ 12 = ₹ 10,80,000.

- Factory overheads are semi-variable overheads:

|                        | (₹)           |                        | (₹)           |
|------------------------|---------------|------------------------|---------------|
| 80% Capacity           | 3,60,000      | 70% Capacity           | 3,40,000      |
| 70% Capacity           | 3,40,000      | 60% Capacity           | 3,20,000      |
| 10% change in capacity | <b>20,000</b> | 10% change in capacity | <b>20,000</b> |

Variable factory overhead = ₹ 20,000 ÷ 10,000 units = ₹ 2

Variable factory overhead for 80,000 units = 80,000 × ₹ 2  
= ₹ 1,60,000

Fixed factory overhead = ₹ 3,60,000 – ₹ 1,60,000 = ₹ 2,00,000.

Variable factory overhead after 5% increase = ₹ 2 × 1.05 = ₹ 2.10

Fixed factory overhead after 10% increase = ₹ 2,00,000 × 1.10  
= ₹ 2,20,000.

5. Selling overhead is semi-variable overhead:

|                        | (₹)           |                        | (₹)           |
|------------------------|---------------|------------------------|---------------|
| 80% Capacity           | 4,20,000      | 70% Capacity           | 3,80,000      |
| 70% Capacity           | 3,80,000      | 60% Capacity           | 3,40,000      |
| 10% change in capacity | <b>40,000</b> | 10% change in capacity | <b>40,000</b> |

Variable selling overhead = ₹ 40,000 ÷ 10,000 units = ₹ 4

Variable selling overhead for 80,000 units = 80,000 × ₹ 4  
= ₹ 3,20,000.

Fixed selling overhead = ₹ 4,20,000 – ₹ 3,20,000 = ₹ 1,00,000

Variable selling overhead after 10% increase = ₹ 4 × 1.10  
= ₹ 4.40

Fixed selling overhead after 15% increase = ₹ 1,00,000 × 1.15  
= ₹ 1,15,000

6. Administrative overhead is fixed:

After 15% increase = ₹ 1,60,000 × 1.15 = ₹ 1,84,000

6. (a) The Practical difficulties with which a Cost Accountant is usually confronted with while installing a costing system in a manufacturing company are as follows:

- Lack of top management support:* Installation of a costing system does not receive the support of top management. They consider it as interference in their work. They believe that such a system will involve additional paperwork. They also have a misconception in their minds that the system is meant for keeping a check on their activities.
- Resistance from cost accounting departmental staff:* The staff resist because of fear of losing their jobs and importance after the implementation of the new system.
- Non co-operation from user departments:* The foremen, supervisor and other staff members may not cooperate in providing requisite data, as this would not only add to their responsibilities but will also increase paper work of the entire team as well.

- (iv) *Shortage of trained staff*: Since cost accounting system's installation involves specialised work, there may be a shortage of trained staff.

To overcome these practical difficulties, necessary steps required are:

- Sell the idea to top management and convince them of the utility of the system.
- Resistance and non co-operation can be overcome by behavioural approach. To deal with the staff concerned effectively.
- Proper training should be given to the staff at each level
- Regular meetings should be held with the cost accounting staff, user departments, staff and top management to clarify their doubts/ misgivings.

(b) Buttermilk is a by-product of butter and treatment of by-product in cost accounting is as follows.

- (i) When they are of small total value, the amount realized from their sale may be dealt as follows:
- Sales value of the by-product may be credited to Profit and Loss Account and no credit be given in Cost Accounting. The credit to Profit and Loss Account here is treated either as a miscellaneous income or as additional sales revenue.
  - The sale proceeds of the by-product may be treated as deduction from the total costs. The sales proceeds should be deducted either from production cost or cost of sales.
- (ii) When the by-products are of considerable total value: Where by-products are of considerable total value, they may be regarded as joint products rather than as by-products. To determine exact cost of by-products the costs incurred upto the point of separation, should be apportioned over by-products and joint products by using a logical basis.
- (iii) When they require further processing: In this case, the net realisable value of the by-product at the split-off point may be arrived at by subtracting the further processing cost from realisable value of by-product. If the value is small, it may be treated as discussed in (i) above.

| <b>Demerits of Flexible Budget</b>                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ol style="list-style-type: none"><li>1. The formulation of flexible budget is possible only when there is proper accounting system maintained, perfect knowledge about the factors of production and various business circumstances is available.</li><li>2. Flexible Budget also requires the system of standard costing in business.</li><li>3. It is very expensive and labour oriented.</li></ol> |

**OR**

(c) Objectives of time keeping and time booking: Time keeping has the following two objectives:

- (i) *Preparation of Payroll:* Wage bills are prepared by the payroll department on the basis of information provided by the time keeping department.
- (ii) *Computation of Cost:* Labour cost of different jobs, departments or cost centers are computed by costing department on the basis of information provided by the time keeping department.

The objectives of time booking are as follows:

- (i) To ascertain the labour time spent on a job and the idle labour hours.
- (ii) To ascertain labour cost of various jobs and products.
- (iii) To calculate the amount of wages and bonus payable under the wage incentive scheme.
- (iv) To compute and determine overhead rates and absorption of overheads under the labour and machine hour method.
- (v) To evaluate the performance of labour by comparing actual time booked with standard or budgeted time.
